PROFESSIONAL SUMMARY

Entry-level Data Analyst skilled in SQL Server (T-SQL), Power BI, Tableau, Excel, Power Query and Python (Pandas). Completed three end-to-end analytics projects in e-commerce, automotive finance and healthcare operations. Delivered insights such as 5 of 30 products driving 42% of sales and raw materials making up 75% of manufacturing cost. Applies analytical thinking and attention to detail to data cleaning, EDA, KPI reporting, data storytelling and interactive dashboards. Pursuing B.Com (expected 2028).

SKILLS

Databases & Querying: SQL Server (T-SQL), SQL Queries, Joins, Aggregations
Data Analysis: Excel, Power Query, Exploratory Data Analysis (EDA), Trend Analysis, Profitability Analysis, Cost Analysis, Budget Variance Analysis, Scenario Analysis, Business Insights
BI & Visualization: Power BI, Tableau, Excel Dashboards, Interactive Dashboards, KPI Dashboards, KPI Reporting, Dashboard Development, Business Intelligence (BI), Data Visualization
Data Preparation: Data Cleaning, Data Validation, Data Quality Checks, Data Transformation, Basic ETL (Power Query)
Programming: Python (Basic), Pandas (Basic), NumPy (Basic)
Soft Skills: Analytical Thinking, Attention to Detail, Problem-Solving, Data Storytelling, Communication, Self-Learning

PROJECTS

Self-directed projects on synthetic datasets. Code and dashboards are on GitHub.

E-commerce Customer 360 Analytics – SQL Server (T-SQL), Power BI, CSV
GitHub: https://github.com/unnatsharma-analytics/ecommerce-customer-360-analytics

- Analyzed 500 customers, 1,200 orders and 1,630 order lines using T-SQL joins and aggregations.
- Built a three-page Power BI dashboard with KPIs and filters on sales, profitability and returns.
- Found Fashion led sales (INR 487K, 24%) and 5 of 30 products drove 42% of sales; 2025 sales rose 14.5%.
- Flagged Backpack (4th in sales, lowest top-five margin) for pricing review; measured 74.2% repeat-order and 5.9% return rates, mostly size/fit.

Corporate Financial Performance & Cost Intelligence – Tableau Public, Python (Pandas, NumPy), CSV
GitHub: https://github.com/unnatsharma-analytics/corporate-financial-performance-cost-intelligence

- Cleaned 480 automotive records (Apr 2024 – Mar 2026) in Pandas and calculated revenue, cost, profit and margin.
- Built three Tableau dashboards on financial performance, plant/model costs and budget variance.
- Found revenue 0.5% below budget and cost 0.9% below, leaving operating profit INR 42 Cr above plan.
- Showed raw materials were 75% of manufacturing cost (Mahindra Scorpio-N alone 29%); modeled a hypothetical 5% cost cut worth INR 997 Cr (INR 290 Cr from Scorpio-N).

Healthcare Operations & Resource Utilization Intelligence – Microsoft Excel, Power Query
GitHub: https://github.com/unnatsharma-analytics/healthcare-operations-intelligence

- Cleaned three 5,430-row datasets in Power Query (types, duplicates, missing values, Trim and Clean).
- Built two Excel dashboards with hospital and month filters on visits, wait time, revenue and occupancy.
- Compared five hospitals (Jan–Jun 2025); Emergency had the longest wait (37.7 min vs 23–24 min elsewhere).
- Found bed occupancy at about 68% (32% vacant), admissions 15% above discharges (28,181 vs 24,487), and General Medicine at 26% of visits.

EDUCATION

Bachelor of Commerce (B.Com), School of Open Learning, University of Delhi, 2025 – 2028 (Expected Graduation).
Senior Secondary (Class 12), CBSE Board, 2025.
Secondary (Class 10), CBSE Board, 2023.

CERTIFICATIONS & TRAINING

Data Analytics Course, National Small Industries Corporation (NSIC), 2026.
